---

Third-year Computer Engineering undergraduate at the University of Indonesia with a strong interest in game development and in IoT, embedded systems and digital chip design. Has built a card-battle game in Java, a pinball machine programmed in AVR Assembly and a Game of Life circuit in VHDL, alongside full-stack web applications. Experienced in leading student web-development teams of up to 15 designers and developers

---

EDUCATION

University of Indonesia | Bachelor of Engineering, Computer Engineering **August 2024 – Present**
Current GPA: 3.63 / 4.00
Relevant coursework: Real Time System and IoT, Embedded System, Design and Management of Computer Networks, Digital System Design, Object-Oriented Programming, Database Systems

---

EXPERIENCE

Vice Head of Finance and Secretary - EXERCISE FTU 2026 **February 2024 - Present**

- Head the secretarial function of the organization, leading and delegating work to 3 staff members.
- Review and quality-check every document the organization issues, covering software and hardware projects as well as internal and external events.

Web Development Vice Lead - NEST UI 2026 **May 2026 - October 2026**

- Co-led a team of 11 UI/UX designers, full-stack developers and data managers that built the event's registration website.
- Managed the UI/UX designers, keeping the designs and the implemented pages consistent.

Project Management Staff - EXERCISE FTUI 2025 **February 2025 - December 2025**

- Led one external project: the development of a registration website for an outside client.
- Managed a team of 15 UI/UX designers and full-stack developers, coordinating tasks and timelines.

PROJECTS

Wild Card – poker-inspired card-battle adventure game (Java, libGDX, Spring Boot, PostgreSQL)

- Designed all of the game's visual assets, including characters, the full playing-card deck, backgrounds and interface buttons.

PinPulse Pinball Game – physical pinball machine on an ATmega328P (AVR Assembly, Arduino UNO)

- Built, in a team of 4, a pinball machine programmed entirely in AVR Assembly: interrupt-driven servo flippers, an infrared ball sensor, an I2C LCD scoreboard and a finite state machine for the game loop.
- Wrote the project documentation covering the hardware architecture and software design.

Game of Life in Hardware – cellular automaton as a digital circuit (VHDL)

- Built, in a team of 4, a hardware Game of Life in which every cell computes its next state in parallel, with a small CPU that draws the starting pattern.

Taskly – workspace-based task management web app (Next.js, Express, PostgreSQL, Redis)

- Led a group of 4 as front-end lead, building the Next.js interface on an Express API with JWT authentication, role-based access control and Redis-backed deadline reminders.

EduGraph – academic and career knowledge graph (React, Express, Neo4j)

- Developed front-end and back-end features and designed the Neo4j graph data model linking courses, skills, careers, faculty and alumni.

SKILLS

Embedded and hardware: Arduino / ATmega328P, AVR Assembly, VHDL, C, timers and interrupts, PWM, I2C
Game development: Java, libGDX, 2D game art and asset design
Web and databases: JavaScript, TypeScript, React, Next.js, Node.js, Express, Spring Boot, PostgreSQL, Redis, Neo4j
Tools: Git and GitHub
Languages: Indonesian (native), English (proficient)
